Github Container Registry

It's container image repository that individual user can create

How?

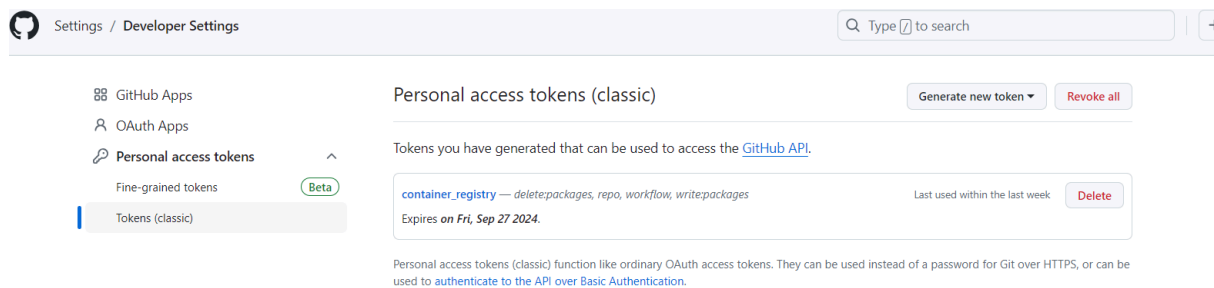

We apply this item to create POD in Airflow operator

It require 'container image'. if it exist in local k8s environment. elsewise it doesn't exist, download image from online repository.

so we use this repository

...

Issue Git token

docker login ghcr.io (token: hash key)

cat token | docker login ghcr.io -u Abel3005 --password-stdin

push image

image's name is formatted as `[ghcr.io/{user_id}/{image identifier}](#)`

docker push [image]

...
